EXPRESSION AND DISTRIBUTION OF TISSUE
CARBOXYLESTERASES THAT CATALYZE DRUG ESTER METABOLISM

ABSTRACT

Carboxylesterases play an important role in drug and environmental ester metabolism. A human liver carboxylesterase (hCE-1) catalyzes the hydrolysis of a variety of drug esters and the ethyl transesterification of cocaine to form cocaethylene. The goals of my research were to determine the tissue distribution of cocaine carboxylesterases in rat, rabbit and human, to identify new members of the human carboxylesterase family, and to characterize the role of tissue carboxylesterases in cocaine and opioid ester metabolism.

In rat tissues, HPLC analysis of reaction products showed that liver had the highest capacity for both cocaine hydrolysis and transesterification, suggesting that liver is the primary site for the enzymatic hydrolysis of cocaine methyl ester. Western blot analysis demonstrated that the expression of rat hydrolase A, a homolog of hCE-1, was prominent in rat liver and lung. Male rat livers also had significantly greater capacity than females in the hydrolysis of cocaine.

A new human carboxylesterase, hCE-2, was cloned and sequenced. Amino acid sequence alignments among mammalian carboxylesterases suggest that humans express different esterase isoforms than do rats, hence the esterase metabolism may be different in rats and humans. It appears that rabbit carboxylesterases are more homologous to the human forms.

The capacity of rabbits to metabolize cocaine was evaluated from the tissue content of the esterase homologous to hCE-1 and the kinetic constants of the purified enzyme. Liver had the highest capacity for cocaine hydrolysis. In the

rabbit, the form homologous to hCE-1 is highly expressed in liver and lung while the form homologous to hCE-2 was highly expressed in liver and the gastrointestinal tissues. hCE-1 catalyzed the hydrolysis of synthetic opioid meperidine to meperidinic acid. This enzyme may be important in the pharmacokinetics of opioid ester elimination.

TABLE OF CONTENTS

	<u>Page</u>
Acceptance page	ii
Acknowledgements	iii
Abstract	iv
Table of Contents	vi
List of Figures	ix
List of Tables	xii
Abbreviations	xiii
INTRODUCTION	1
I. Cocaine metabolism, pharmacology and toxicity	1
II. Opioid drug ester metabolism, pharmacology and toxicity	9
III. Characteristics of tissue carboxylesterases	12
IV. Expression and tissue distribution of carboxylesterases	22
V. Objectives of thesis research	27
METHODS	28
I. Purification and characterization of human and rabbit carboxylesterases	28
I) Purification of human and rabbit liver carboxylesterases	28
II) Steady-state kinetic analysis for cocaine	30
III) Competitive inhibition of opioid esters	34
IV) GC-MS analysis of meperidinic acid formation	35
V) K_m determination for meperidine	35
VI) Determination of IC_{50} values of organophosphate compounds	36
II. Cloning of members of human carboxylesterase family	37
I) PCR cloning and sequencing of hCE-2	37

II)	PCR cloning and expression of hCE-1	40
III)	Northern blot analysis of hCE-1 and hCE-2	43
III.	Tissue distribution of carboxylesterases in rats and rabbits	44
I)	Carboxylesterase activities in rat tissues	44
II)	Carboxylesterase activities in male and female rat tissues	45
III)	Gel electrophoresis and Western blot analysis of tissue carboxylesterases	46
IV)	Northern blot analysis of rat hydrolase A	47
V)	Content of rabbit carboxylesterase form 1 in tissues	48
VI)	Statistical analysis	49
IV.	Capacity of cocaine metabolism in rabbit tissues	49
 RESULTS		 50
I.	Characterization of tissue carboxylesterases	50
I)	Purification of human and rabbit liver carboxylesterases	50
II)	Steady-state kinetics of rabbit carboxylesterase form 1 for cocaine	53
III)	Opioid ester inhibition and steady-state kinetics of human carboxylesterase form 1 (hCE-1)	56
IV)	Inactivation of hCE-1 by organophosphate compounds	61
II.	cDNA cloning of human carboxylesterases	66
I)	Identification of new members of the human carboxylesterase family	66
II)	cDNA cloning and expression of hCE-1	68
III)	Northern blot analysis of hCE-1 and hCE-2	72
III.	Tissue distribution of carboxylesterases	76
I)	Cocaine carboxylesterase activity, protein and mRNA in rat tissues	76
II)	Gender-specific differences in carboxylesterase activities	83

and proteins in the rat	
III) Tissue content of rabbit carboxylesterases	88
IV. Capacity of rabbit tissues for cocaine metabolism	92
DISCUSSION	94
I. The carboxylesterase family	94
II. Role of carboxylesterases in drug metabolism and toxicity	103
III. Expression and tissue distribution of carboxylesterases in rats	108
IV. Use of the rabbit as an animal model for drug ester metabolism by carboxylesterases	114
