**TRANSCRIPTIONAL REGULATION OF PYRUVATE
DEHYDROGENASE KINASE-4 GENE EXPRESSION**

Hye-Sook Kwon

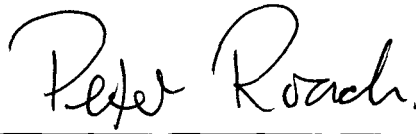

Submitted to the faculty of the University Graduate School
in partial fulfillment of the requirements
for the degree
Doctor of Philosophy
in the Department of Biochemistry and Molecular Biology
Indiana University

June 2004

Accepted by the Faculty of, Indiana University, in partial fulfillment of the requirements for the degree of Doctor of Philosophy.

Robert A. Harris, Ph.D., Chairman
Department of Biochemistry and Molecular Biology

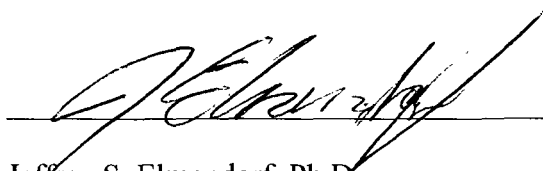

Peter J. Roach, Ph.D.
Department of Biochemistry and Molecular Biology

Doctoral Committee

Howard J. Edenberg, Ph.D.
Department of Biochemistry and Molecular Biology
Department of Medical and Molecular Genetics

May 4, 2004

Jeffrey S. Elmendorf, Ph.D.
Department of Physiology and Biophysics

TABLE OF CONTENTS

Title Page -----	i
Acceptance Page -----	ii
Dedication -----	iii
Acknowledgements -----	iv
Abstract -----	v
Table of Contents -----	viii
List of Tables -----	xiv
List of Figures -----	xv
Abbreviations -----	xviii
I. INTRODUCTION -----	1
1. Pyruvate dehydrogenase (PDH) complex -----	1
1.1. Structure and reaction of the PDH complex -----	1
1.2. Regulation of the PDH complex -----	2
2. Pyruvate Dehydrogenase Kinases (PDKs) and Phosphatases (PDPs) -----	4
2.1. Pyruvate Dehydrogenase Kinases (PDKs) -----	4
2.2. Pyruvate Dehydrogenase Phosphatases (PDPs) -----	6
2.3. Regulation of PDH activity by PDKs -----	6
2.4. Regulation of PDH activity by PDPs -----	8
3. Regulation of gene expression of PDKs -----	8
3.1. The effects of different nutrition states on regulation of gene expression of PDKs --	8
3.2. The factors that regulate PDK4 gene expression -----	11

- 4. Regulation of gene expression by glucocorticoids ----- 13
- 5. Regulation of gene expression by insulin ----- 15
- 5.1. PKB phosphorylates FOXO transcription factors ----- 17
- 5.2. Regulation of gene expression by FOXO transcription factors ----- 20
- 6. Regulation of gene expression by histone modification ----- 21
- 6.1. Histone modification by nuclear receptors ----- 23
- 6.1.1. Regulation of gene expression by retinoic acid receptors and orphan receptor --- 25
- 6.2. Regulation of gene expression by Sp1 and CCAAT-box binding factor (CBF) ----- 26
- 7. Statements of specific aims in this thesis ----- 28

II. REGULATIN OF HUMAN PDK4 GENE EXPRESSION BY

- GLUCOCORTICOIDS AND INSULIN ----- 29**
- 1. Summary ----- 29
- 2. Materials and methods ----- 30
- 2.1. Materials ----- 30
- 2.2. Isolation of total RNA from HepG2 cells ----- 31
- 2.3. Northern blot analysis ----- 32
- 2.4. Plasmid construction ----- 33
- 2.5. Mammalian cell culture and transient expression assays ----- 34
- 2.6. *In vitro* transcription and translation of FOXO3a ----- 35
- 2.7. Electrophoretic mobility shift assays (EMSAs) ----- 35
- 2.8. Site-directed mutagenesis ----- 36

3. Results -----	38
3.1. Regulation of hPDK4 expression by dexamethason and insulin -----	38
3.2. GR binds to the region -824/-809 bp within the hPDK4 promoter -----	41
3.3. Constitutively active FOXO1a and FOXO3a increase both hPDK4 basal expression and induction by dexamethasone -----	41
3.4. Constitutively active PKB α blocks the induction of hPDK4 by dexamethasone; constitutively active FOXO1a and FOXO3a prevent PKB inhibition -----	44
3.5. FOXO1a and FOXO3a bind to the regions -738/-731 bp (IRS1), -533/-526 bp (IRS2), and -361/-354 bp (IRS3) in the hPDK4 promoter -----	47
3.6. IRSs are necessary for glucocorticoid-stimulated hPDK4 expression and insulin represses hPDK4 induction through IRSs -----	52
3.7. FOXO factors exert their function through the IRSs -----	54
3.8. The p300/CBP that interacts with GR and FOXO factors is required for hPDK4 gene activation by dexamethasone -----	54
4. Discussion -----	57

III. MECHANISM RESPONSIBLE FOR LOW BASAL EXPRESSION OF HUMAN PDK4 GENE -----	65
1. Summary -----	65
2. Materials and methods -----	66
2.1. Materials -----	66
2.2. Northern blot analysis -----	66

2.3. Plasmid construction -----	67
2.4. Mammalian cell culture and transient expression assays -----	67
2.5. Preparing of nuclear extracts from cultured cells -----	68
2.6. Western blot analysis -----	69
2.7. Electrophoretic mobility shift assays (EMSAs) -----	69
2.8. Site-directed mutagenesis -----	70
2.9. Chromatin immunoprecipitation (ChIP) assay -----	71
3. Results -----	74
3.1. RA and TSA increase the abundance of PDK4 but not PDK2 message -----	74
3.2. RA activates hPDK4 gene expression through two RAREs that bind RXR α /RAR α -----	74
3.3. TSA activates hPDK4 gene transcription through a region containing two RAREs, a GC box, and a CCAAT box -----	80
3.4. Both Sp1 and CBF are required for hPDK4 expression in the basal and induced states -----	81
3.5. RA and TSA increase acetylation of histones bound to the hPDK4 proximal promoter -----	87
3.6. p300/CBP is required for hPDK4 gene activation by RA and TSA -----	89

4. Discussion -----	89
III. COUP-TFI COOPERATES WITH RXRα/RARα TO ACTIVATE hPDK4	
GENE EXPRESSION -----	96
1. Summary -----	96
2. Materials and methods -----	96
2.1. Materials -----	96
2.2. Methods -----	97
3. Results and discussion -----	97
3.1. COUP-TFI binds to RARE1 and 2 -----	97
3.2. COUP-TFI synergistically activates hPDK4 gene expression with RXR α /RAR α /RA -----	97
3.3. RXR α /RAR α preferentially binds to RARE1 and COUP-TFI to RARE2 -----	101
3.4. Two RAREs, Sp1, and CBF are required for hPDK4 gene activation by RXR α /RAR α /COUP-TFI/RA -----	101
IV. DISCUSSION -----	105
1. Glucocorticoids and retinoic acids synergistically activate human PDK4 gene expression -----	105
2. Regulation of PDK4 gene expression in rodents -----	108
3. Regulation of PDK4 gene expression through 3' untranslated region (3'UTR) -----	109
4. Regulation of PDK2 gene expression -----	111

V. CONCLUSION	113
VI. REFERENCES	115
CURRICULUM VITAE
