

Background

When it comes to inequalities in medicine, there are countless avenues through which barriers are placed that lead to worse health outcomes for marginalized groups.

One inequality that isn't mentioned nearly as often is how difficult it is for marginalized groups to participate in clinical trials.

Acknowledgement

This project was funded, in part, with support from the Short Term Training Program in Biomedical Sciences Grant funded, in part by T35 HL 110854 from the National Institutes of Health. The content is solely the responsibility of the authors and does not necessarily represent the official views of the National Institutes of Health.

Methods

Results

- Discrepancy in participation of POC patients in cardiovascular disease clinical trials
- Preliminary findings of potential barriers and solutions
- Confirmation of the validity of our methodology

Future Direction

- Continue to interview experts in the field
- Determine barriers and solutions to the decreased participation of POC Patients
- Conduct a clinical trial addressing those barriers
