Errata to "Impact of Spectral Resolution on Quantifying Cyanobacteria in Lakes and Reservoirs: A Machine-Learning Assessment"

Kiana Zolfaghari, Nima Pahlevan, Caren Binding, Daniela Gurlin, Stefan G. H. Simis, Antonio Ruiz Verdú, Lin Li, Christopher J. Crawford, Andrea VanderWoude, Reagan Errera, Arthur Zastepa, and Claude R. Duguay,

In the above article [1], the references in the following paragraph should be corrected as shown below. This excerpt appears in the first column on page 4 of the above article.

The fourth set of inland waters are Loskop Dam (25. 25.07', 29. 21.53' E), Hartbeespoort Dam (25. 44.38' S, 27. 51.55' E), and Theewaterskloof Dam (34. 4.68' S, 19. 17.35' E); three reservoirs selected to capture the diverse bloom conditions in South African inland waters. Further details on these reservoirs can be found in [56] and [57].

The full references details are provided here for the reader's convenience:

Robertson Lain, "Distinguishing cyanobacteria from algae in optically complex inland waters using a hyperspectral radiative transfer inversion algorithm," *Remote Sensing of Environment*, vol. 248, 2020, Art. No. pp. 111981, doi: 10.1016/j.rse.2020.111981.

The complete Acknowledgment section should read as: "The authors would like to thank Steve Ruberg (NOAA-GLERL) for providing the field data for Lake Erie, and Mark Matthews (CyanoLakes) for providing the field data for South Africa (available at https://github.com/CyanoLakes/data). Part of the data was accessed through the Lake Bio-optical Measurements and Matchup Data for Remote Sensing (LIMNADES) dataset (available at https://limnades.stir.ac.uk/Limnades_login/index.php. This research was undertaken thanks to funding from the Canada First Research Excellence Fund through the Transformative Sensor Technologies and Smart Watershed project (C. R. Duguay, PI) within the Global Water Futures program. Any use of trade, firm, or product names is for descriptive purposes only and does not imply endorsement by the U.S. Government."
